

MULTIDIMENSIONAL POVERTY INDEX, INDIA

A Social Group Perspective, 2019-21

Introduction

The multifaceted nature of poverty, including deprivations in health, education, and other essential dimensions, has led to a shift away from the unidimensional economic measures of poverty. The methods for measuring poverty have evolved significantly, transitioning from a single-dimensional international poverty line to methodologically refined indices such as the UNDP Multidimensional Poverty Index (MPI). The MPI has gained prominence in Indian policy circles and is adopted by NITI Aayog as a comprehensive indicator for the assessment of multidimensional poverty in India. The national report focuses on state and district-level estimates of multidimensional poverty headcount, intensity, and index values.

It is widely acknowledged that the SC and ST populations have historically faced discrimination hindering access to better livelihoods and equitable resource distribution. The Constitution of India has important provisions for administrative autonomy, democratic representation and socioeconomic well-being of these vulnerable population groups. The situation of these groups is also likely to vary across states and districts in India. Our findings on the Multidimensional Poverty Index across social groups could further inform policymaking to achieve more inclusive and equitable poverty reduction strategies for vulnerable population groups.

Methodology

The global MPI structure consists of three dimensions, including health, education, and living standards, and ten indicators with both dimensions and indicators equally weighted. A deprivation profile is established for each person pointing towards the deprived indicators. Along with it, a headcount ratio (H) indicating the percentage of multidimensionally poor population and intensity of poverty (A) represented by the average

Figure 1: Multidimensional poverty: Headcount Ratio by Social Groups

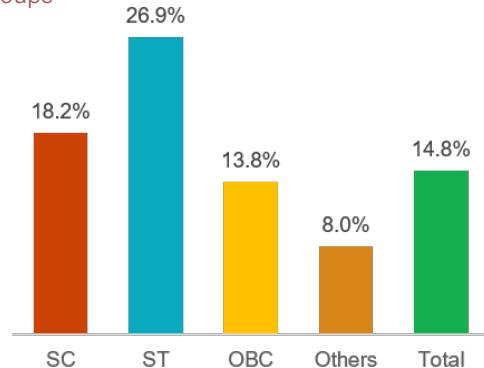

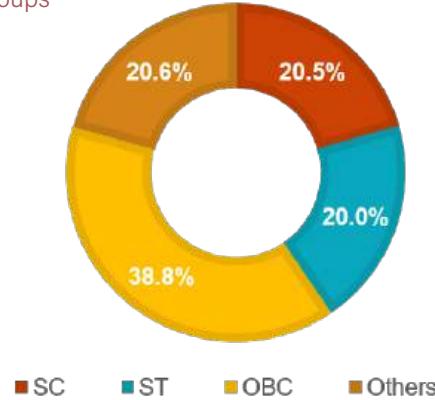

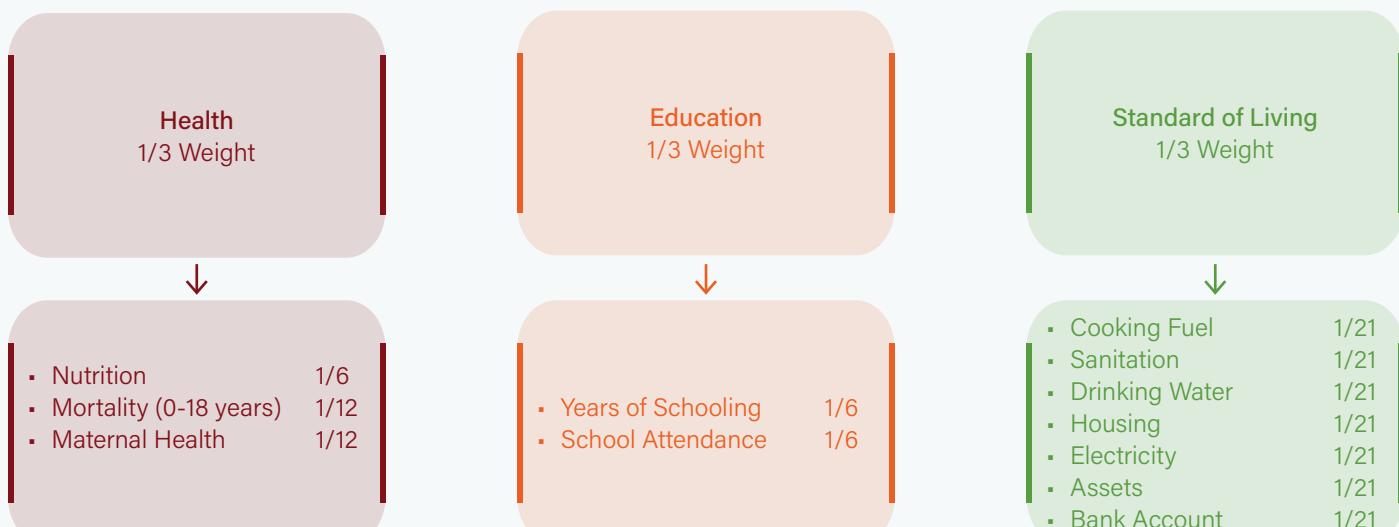

Figure 2: Multidimensional Poverty: Share distribution by Social Groups

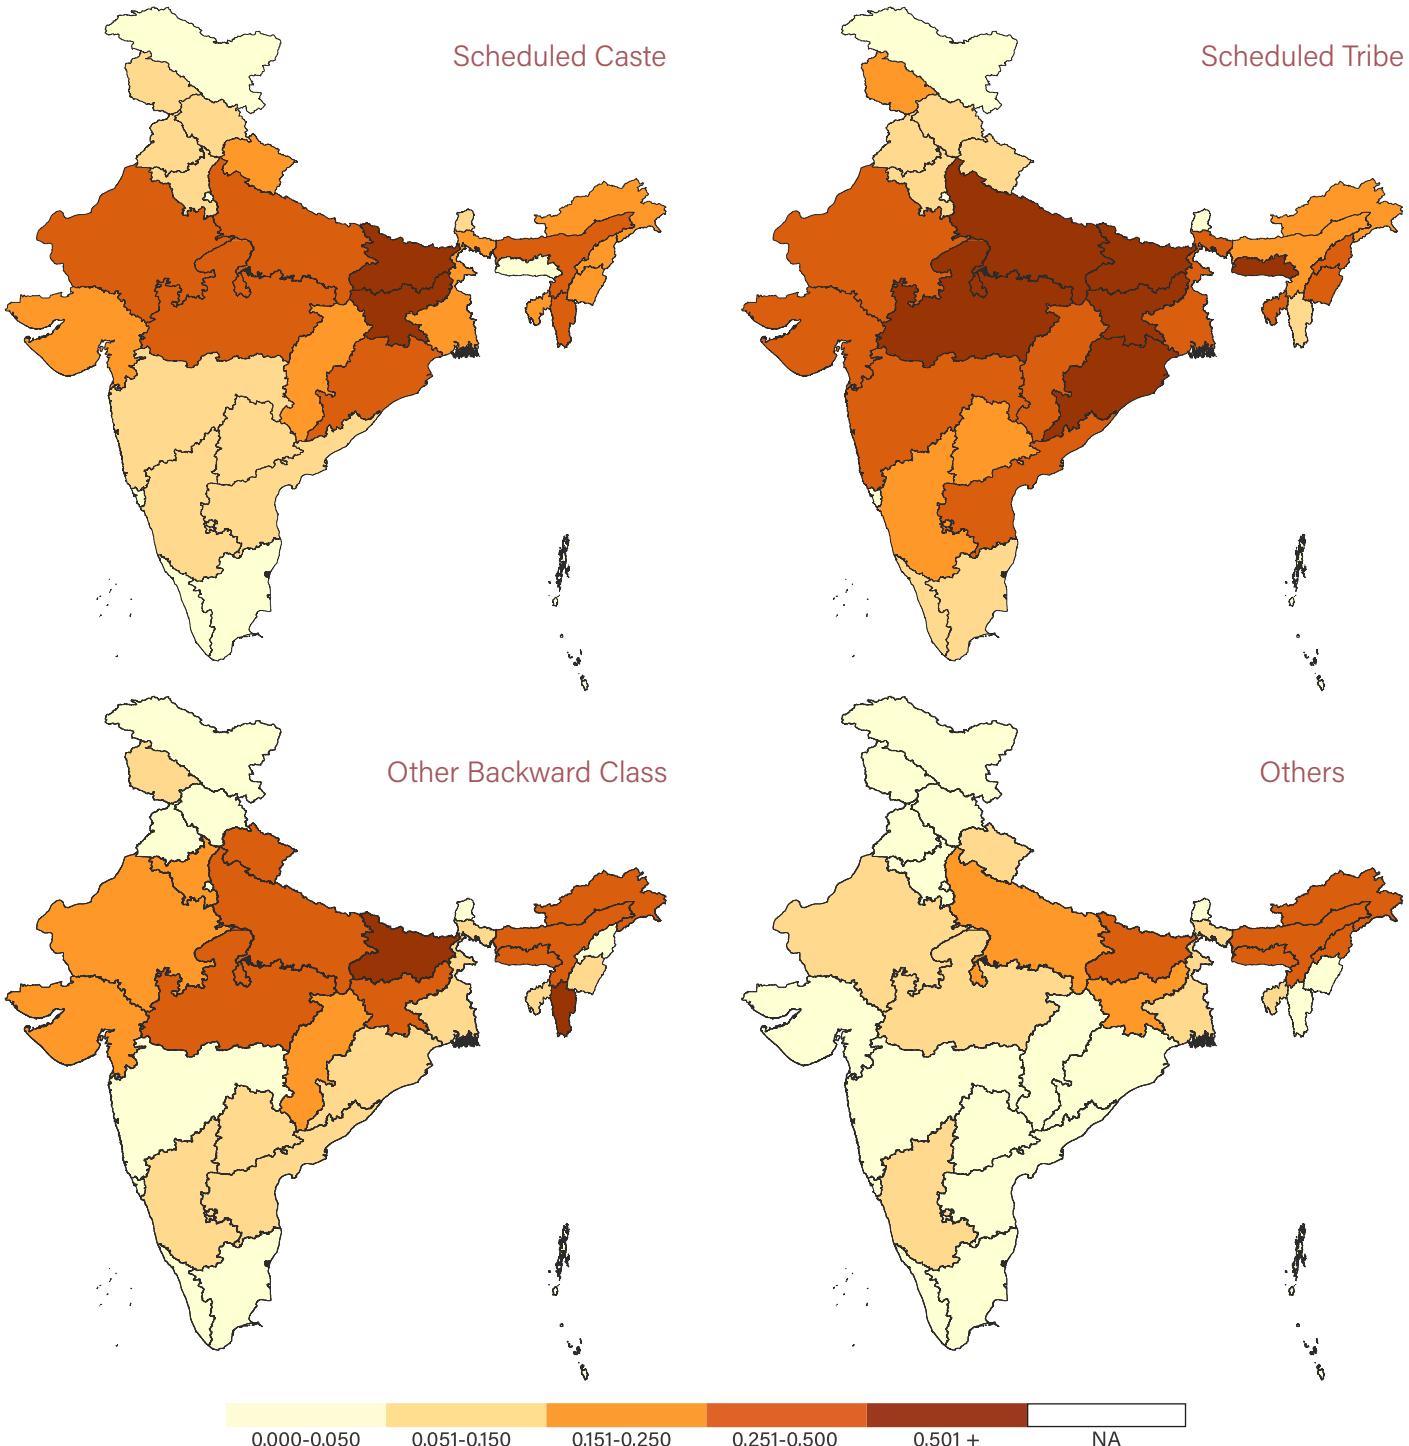

percentage of weighted deprivations experienced by the poor, is obtained. MPI is calculated as a multiplicative sum of $H \times A^1$. The NITI Aayog, while, incorporating all ten global MPI indicators, expands its scope to include maternal health and bank accounts, aligning with India's development priorities.² Data for the present analysis was extracted from NFHS 5 (2019-21) for the Indian states and districts across various social groups.

Figure 3: Indicator wise weight of deprivations

State level Multidimensional poverty Headcount ratios for Social Groups

As per Census 2011, the share of ST population in India is 8.6%,³ however, they account for over 20% of the multidimensional poor in India.

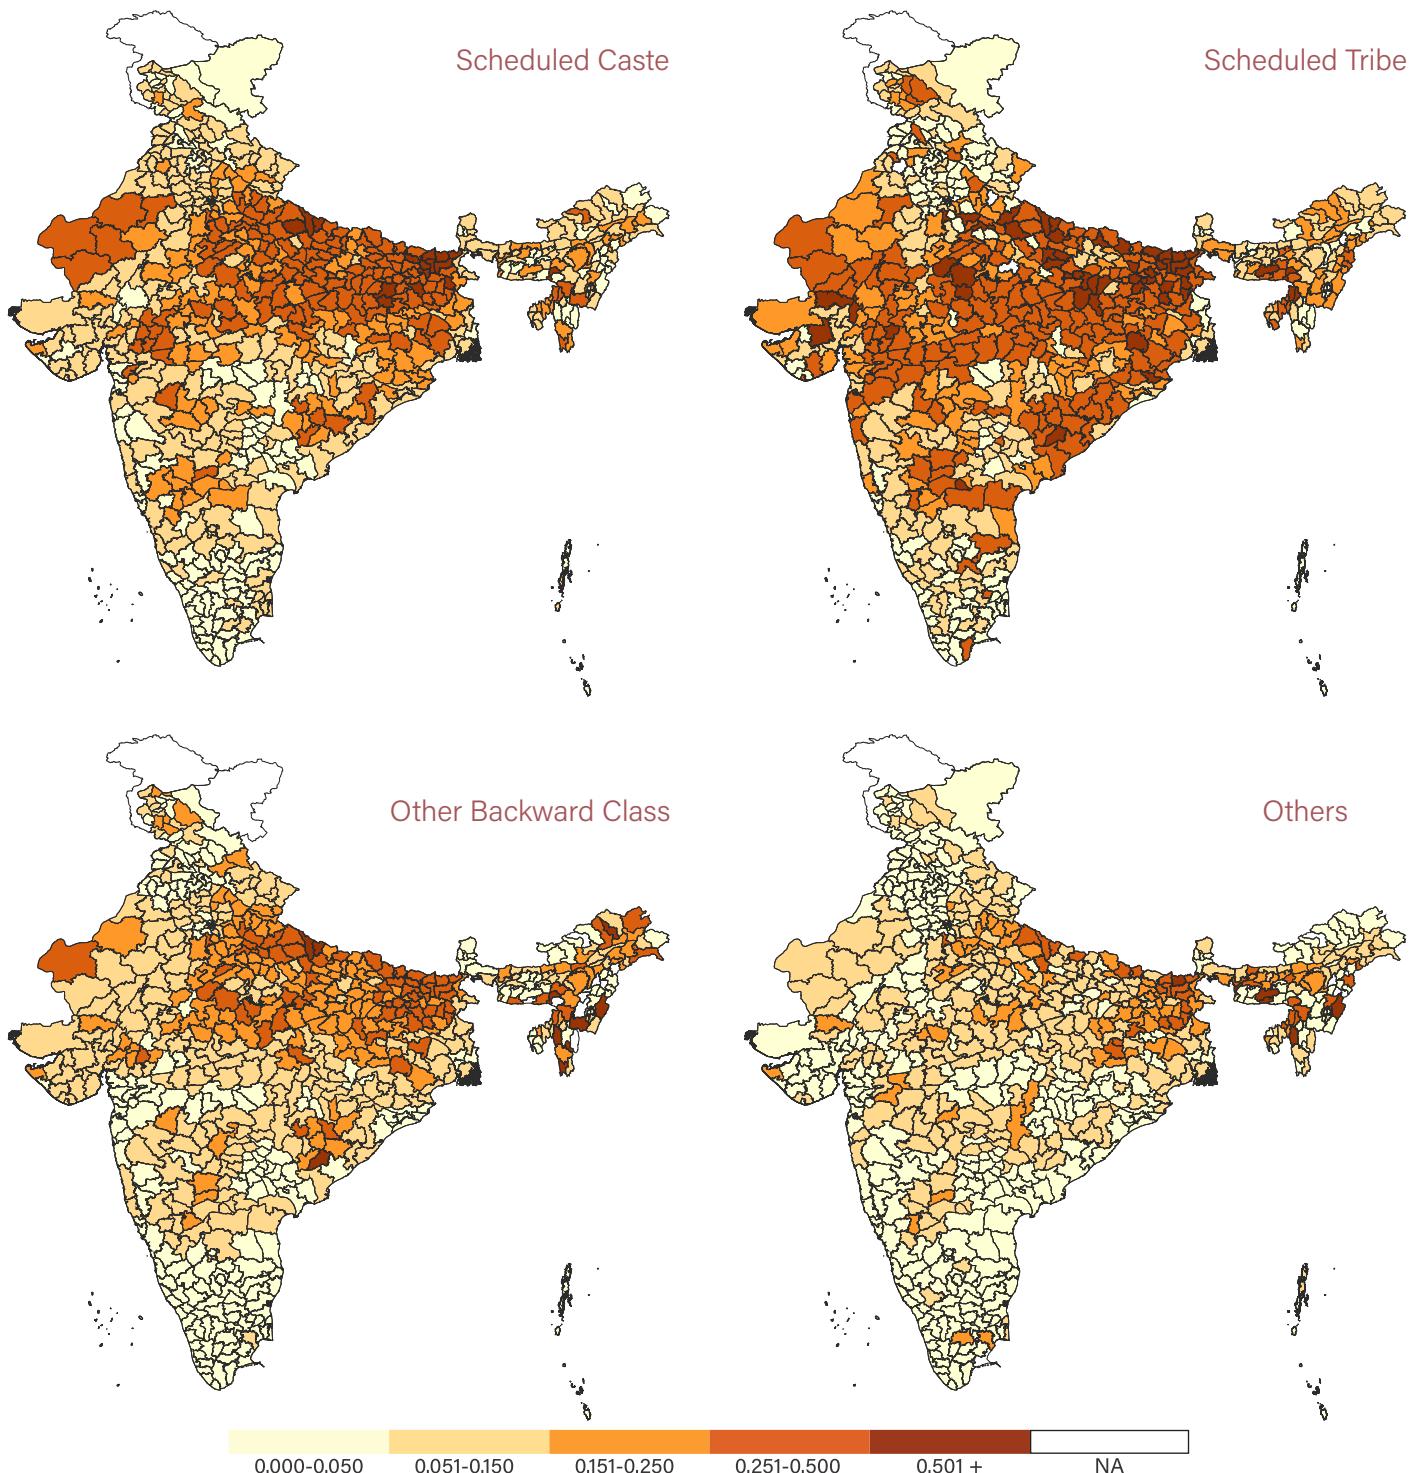

States/UTs with highest Multidimensional Poverty Headcount Ratios for Social Groups

| Scheduled Caste | | Scheduled Tribe | | Other Backward Class | | Others | |
|-----------------|-------|-----------------|-------|----------------------|-------|-------------------|-------|
| State/UT | HCR | State/UT | HCR | State/UT | HCR | State/UT | HCR |
| Bihar | 0.458 | Bihar | 0.466 | Mizoram | 0.333 | Nagaland | 0.223 |
| Jharkhand | 0.350 | Jharkhand | 0.384 | Bihar | 0.308 | Meghalaya | 0.199 |
| Uttar Pradesh | 0.287 | Madhya Pradesh | 0.357 | Uttar Pradesh | 0.227 | Bihar | 0.197 |
| Madhya Pradesh | 0.225 | Uttar Pradesh | 0.353 | Arunachal Pradesh | 0.219 | Assam | 0.173 |
| Rajasthan | 0.190 | Odisha | 0.328 | Jharkhand | 0.216 | Arunachal Pradesh | 0.168 |

* HCR : Headcount Ratio; A: Intensity; MPI: Multidimensional Poverty Index

District level Multidimensional Poverty Headcount Ratio by Social Groups

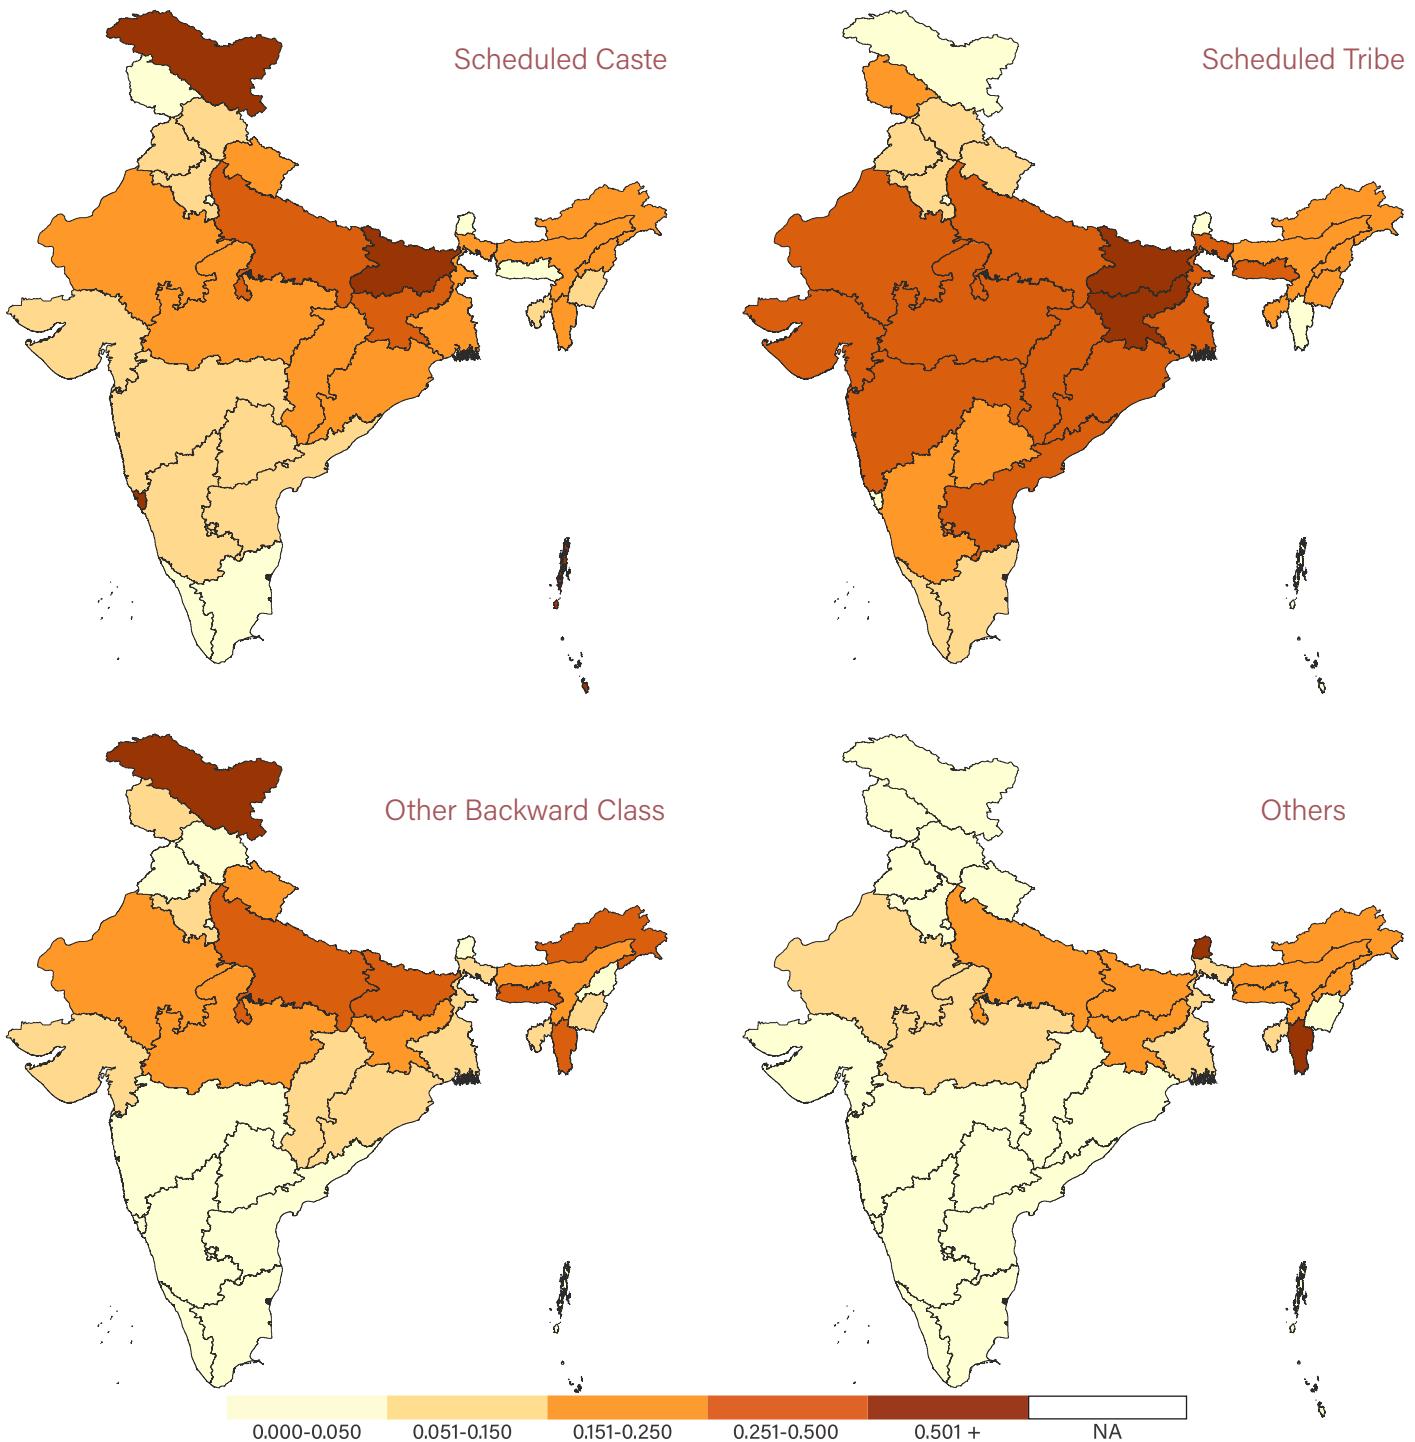

In 50 districts, more than 50% of the ST population is multidimensional poor.

* Districts with fewer than 25 samples were excluded

State level Multidimensional Poverty Index Values for Social Groups

The ST population exhibits highest levels of headcount and intensity of Multidimensional Poverty.

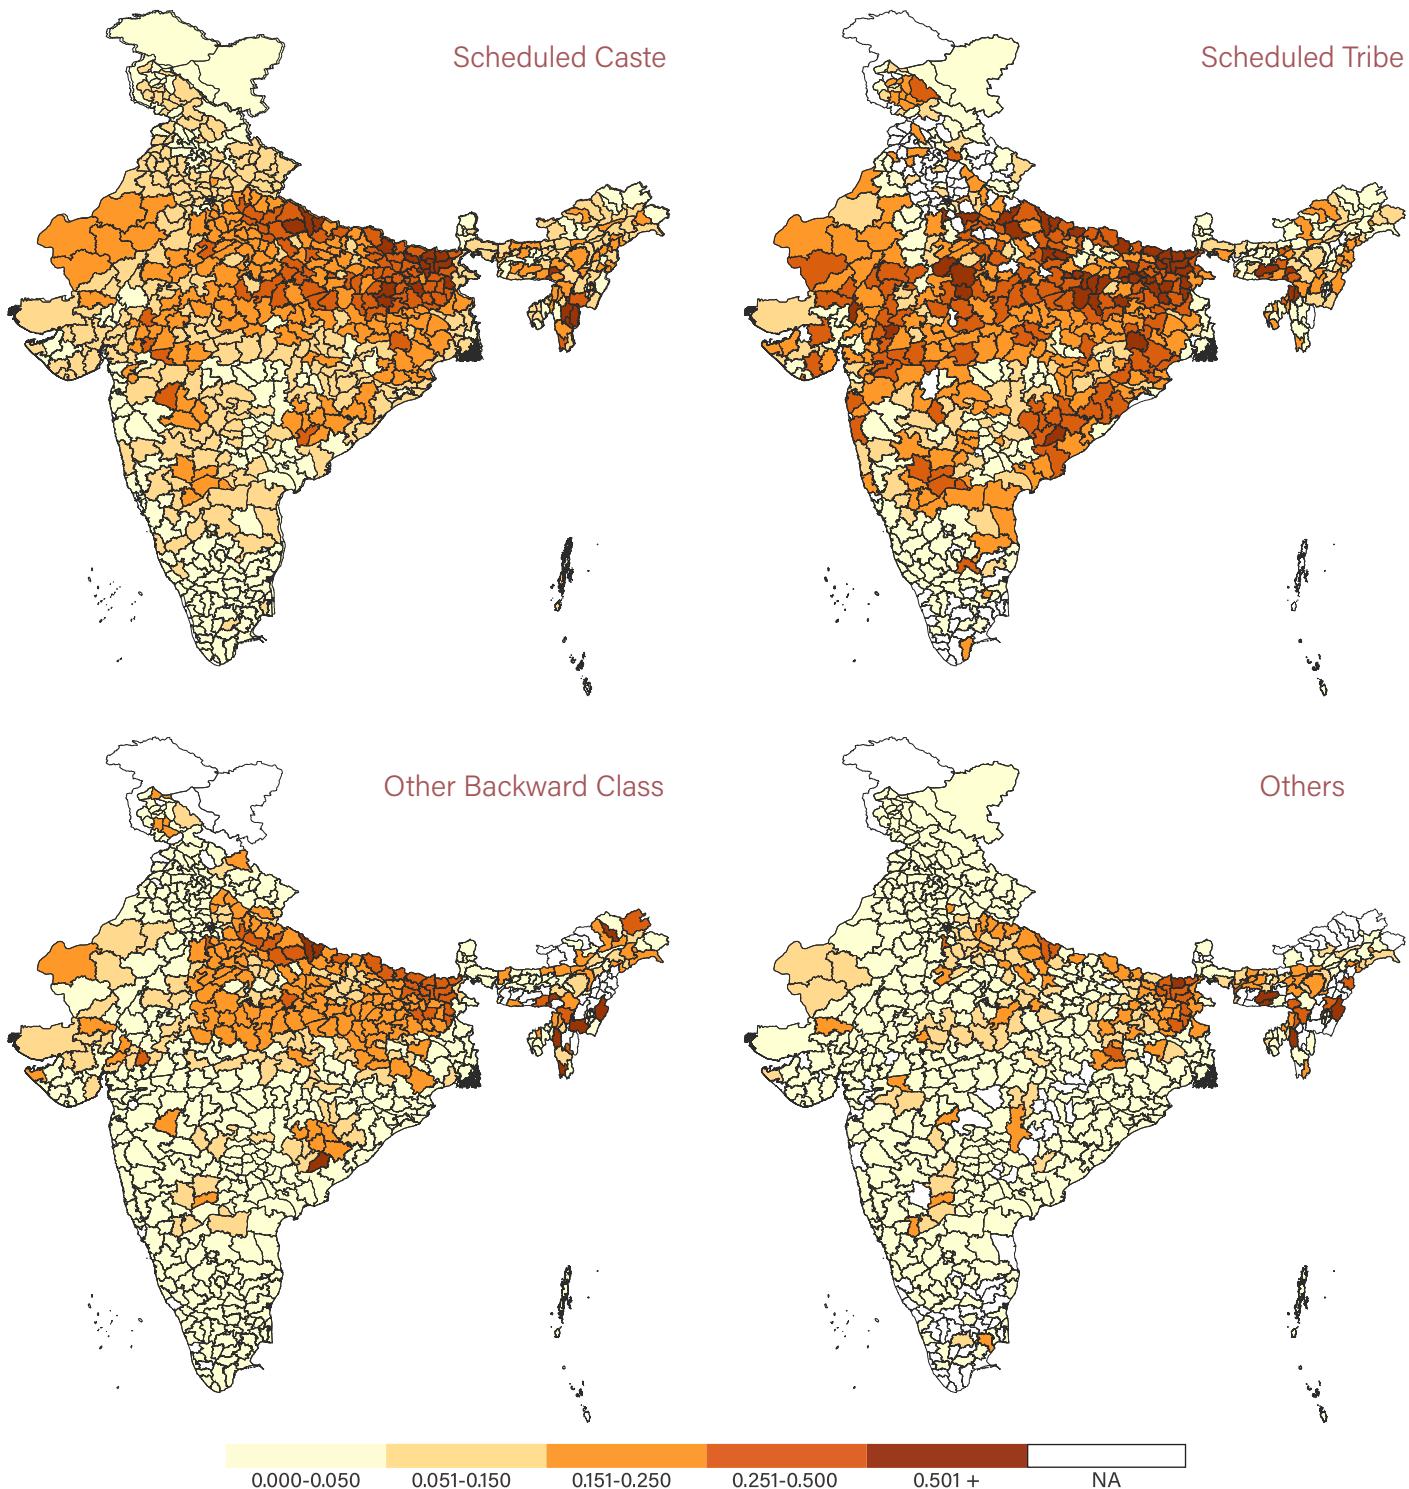

States/UTs with highest Multidimensional Poverty Index Values for Social Groups

| Scheduled Caste | | Scheduled Tribe | | Other Backward Class | | Others | |
|-----------------|-------|-----------------|-------|----------------------|-------|-------------------|-------|
| State /UT | MPI | State /UT | MPI | State /UT | MPI | State /UT | MPI |
| Bihar | 0.225 | Bihar | 0.234 | Mizoram | 0.159 | Nagaland | 0.095 |
| Jharkhand | 0.161 | Jharkhand | 0.184 | Bihar | 0.142 | Meghalaya | 0.093 |
| Uttar Pradesh | 0.130 | Uttar Pradesh | 0.171 | Arunachal Pradesh | 0.104 | Bihar | 0.091 |
| Madhya Pradesh | 0.098 | Madhya Pradesh | 0.163 | Uttar Pradesh | 0.101 | Arunachal Pradesh | 0.076 |

Indicator specific Deprivation Headcount ratio by Social Groups

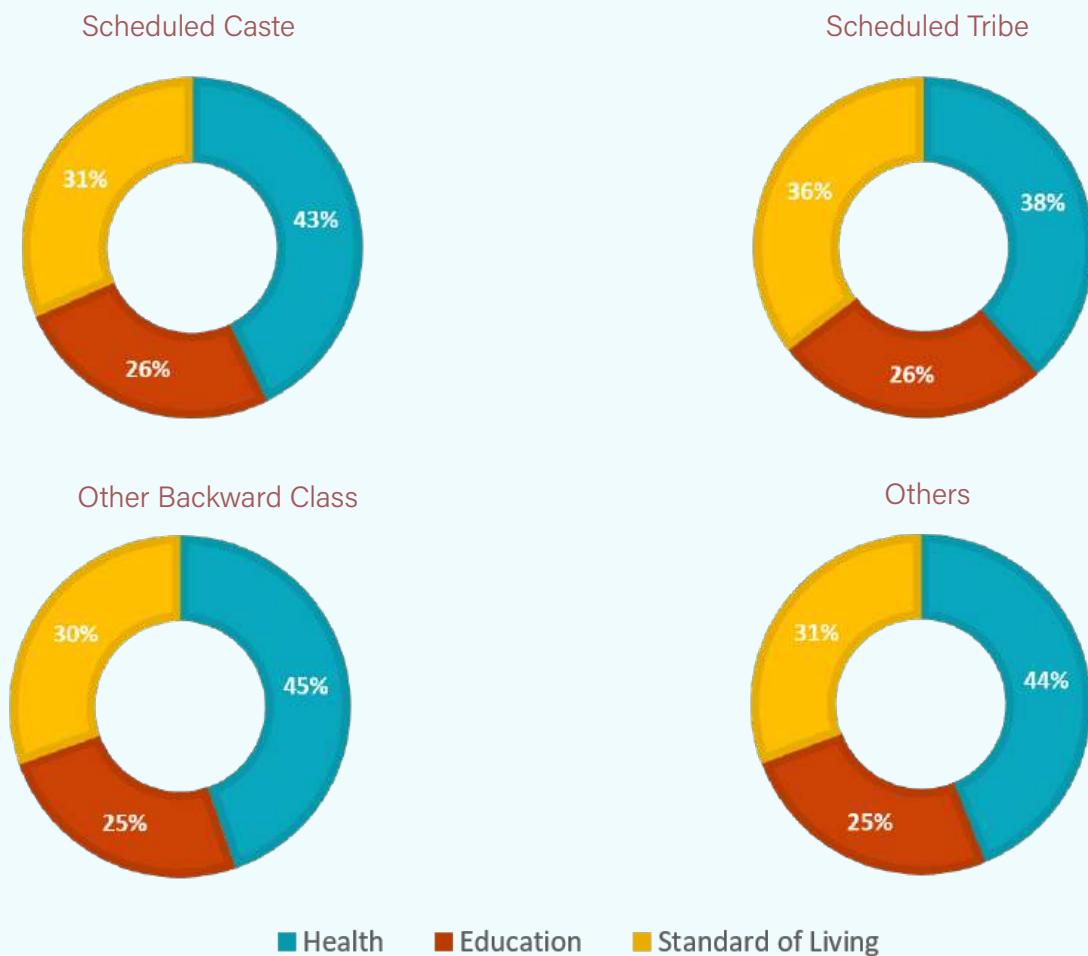

- Scheduled Tribe population has the highest deprivation HCR in Cooking Fuel (24.5%), Housing(23.3%), Nutrition(20.3%) and Sanitation (18.2%).
- Scheduled Castes (SC) population has the highest deprivation HCR in Housing (15.2%), Fuel (14.9%), and Nutrition (14.4%).
- The OBC population has the highest deprivation HCR percentages in nutrition (11.2%), fuel (11.0%), and housing (10.8%).
- Indicators such as bank account access, electricity, child mortality, and water facilities show relatively lower deprivation levels across all groups.

Contributions of deprivations to Multidimensional Poverty Index by Social Groups

- Nutrition has the highest impact on MPI for all groups, ranging from 27% for Scheduled Tribes to around 30-31% for Other Backward Classes, Scheduled Castes, and Others.
- Years of Schooling is the second biggest contributor to MPI across all groups, accounting for 15.7% to 17.5%.
- Maternal health (10.2-12.2%), Housing (8.5-9.2%), and Cooking Fuel (8.6-9.6%) have significant contributions to MPI across all social groups.
- Indicators such as child mortality, electricity, water, and bank account access show relatively lower contributions (generally below 2%) across all groups.

Dimension wise contribution to Multidimensional Poverty Index (MPI)

Summary

The analysis is based on NFHS-5 (2019-21) and NITI Aayog's framework, comprising three dimensions (health, education, and living standards) and twelve indicators. Analysis reveals highest deprivation in nutrition across all social groups, followed by education. Indicators such as bank accounts, electricity, and water facilities show minimal deprivation. Given high burden among ST population, attention should be directed towards improving access to clean cooking fuel, housing, and nutrition. Health and education are critical dimensions showing substantial deprivations. These indicators, however, might partially reflect the historical disadvantages experienced by older cohorts. The current educational deprivation levels, for instance, may improve naturally as younger, more educated cohorts enter the measurement framework, given the recent improvements in educational access and retention. These findings emphasise the need for interventions focusing on basic amenities, health and nutrition, while also considering the potential demographic shifts in educational and health indicators.

Priority Areas for Action

- For the Scheduled Caste population, the dimensions such as Nutrition, Sanitation, and Years of Schooling collectively account for over half of the contributions to multidimensional poverty.
- Among the Scheduled Tribe population, the dimensions of Nutrition, Years of Schooling, and Assets contribute significantly, collectively comprising almost 50% of multidimensional poverty. Cooking fuel and housing further contribute to almost one-fifth of the Multidimensional Poverty.
- For the Other Backward Class, the dimensions of Nutrition, Cooking Fuel, and Housing contribute over half to multidimensional poverty.
- For others, the dimensions such as Nutrition, School Attendance, and Maternal Health constitute more than 50% of the contributions to multidimensional poverty.

Methodology for Multidimensional Poverty Index, (NITI Aayog)

The global multidimensional poverty index has undergone important methodological evolutions since its inception in 2010. Currently, the dual-cutoff counting methodology developed by (Alkire and Foster, 2011)⁴ is being utilised in the calculation of global multidimensional poverty index. The Alkire-Foster framework for measuring multidimensional poverty is grounded in Amartya Sen's concept of capability deprivation and Atkinson's counting methods. This methodology employs a two-step approach: identification and aggregation. The dual cut-off method involves setting thresholds for both poverty and deprivation. An individual is considered poor if their deprivation score reaches or surpasses the poverty cutoff, 'k'. A universal cutoff of one-third ($k=0.333$) has been established.

The Headcount Ratio and Intensity are defined as :

$$H = \frac{1}{n} \sum_{i=1}^n \rho(g_i^0, w, k), A = \frac{1}{q} \sum_{i=1}^n (\rho(g_i^0, w, k) \times c_i),$$

$$\text{where } q = \sum_{i=1}^n \rho(g_i^0, w, k)$$

Consequently, the adjusted poverty headcount ratio (MPI) is calculated as :

$$\text{MPI} = M_0 = H \times A = \frac{1}{n} \sum_{i=1}^n (\rho(g_i^0, w, k) \times c_i).$$

The NITI Aayog constructed a national MPI adhering to the Alkire and Foster (AF) methodology employed in the global MPI creating an indigenized measure of assessing multidimensional poverty. India's Multidimensional Poverty Index (MPI) approach defines individuals under five years of age and within the working-age range of 15 to 54 for men and 15 to 49 for women as relevant population segments. However, when assessing child-adolescent mortality, a narrower age group is employed, including children aged 0 to 59 months and adolescents aged 10 to 18 years. In contrast to traditional monetary poverty assessments based on consumption expenditure, the national MPI provides a granular analysis of deprivations at the district level.

The dual cut off methodology employs majorly two steps namely identification and aggregation. Identification involves building a deprivation profile by applying cutoffs within an indicator and identifying the incidence of multidimensional poverty by applying a cut-off across all indicators. The deprivation of each individual is marked as either 0 or 1 indicating not deprived (0) and deprived (1). If the achievement of an individual i in indicator j is denoted by x_{ij} , the first order cut off for indicator j is denoted by z_j , and the status of the individual is denoted by g_{ij}^0 , then

$$g_{ij}^0 = 1 \text{ if } x_{ij} < z_j \text{ and } g_{ij}^0 = 0 \text{ otherwise for all } i = 1, 2, \dots, n \text{ and } j = 1, 2, \dots, d$$

The counting vector or deprivation score is the sum of the weighted status of all the indicators for an individual.

The deprivation score for individual i is denoted as:

$$c_i = w_1 g_{i1}^0 + w_2 g_{i2}^0 + \dots + w_d g_{id}^0, \text{ or } c_i = \sum_{j=1}^d w_j g_{ij}^0$$

where c_i is the counting vector for individual i upto the j th indicator, g_{ij}^0 is the status of each indicator and w_j is the weight assigned to each indicator.

The poverty cut-off also mentioned as the second order cut-off is deployed to be 0.33 (33%) is the minimum deprivation score as individuals having a deprivation score greater than or equal to the second order cut off are considered to be multidimensionally poor. A score less than second order cut off is replaced with 0.

Headcount Ratio (H), where q is the total number of multidimensionally poor people in a population n is computed as,

$$H = \frac{q}{n}.$$

Similarly, the average proportion of deprivations experienced by multidimensionally poor individuals denoted by Intensity of Poverty (A) is computed as,

$$A = \frac{1}{q} \sum_{i=1}^q c_i(k)$$

MPI is represented as $M_0 = H \times A$

$$\text{Or } H \times A = \frac{q}{n} * \frac{1}{q} \sum_{i=1}^q c_i(k) = \frac{1}{n} \sum_{i=1}^n c_i(k) = \frac{1}{n} \sum_{i=1}^n \sum_{j=1}^d w_j g_{ij}^0(k)$$

(where, $c_i(k)$ is the censored deprivation score up to the i th individual and q is the number of multidimensionally poor individuals. Further, g_{ij} is household member status and w_j is the weight of j th indicator. Here, n is the total population and d is the number of dimensions)

$$\text{Deprivation Score} = \frac{1}{3} \text{ Health}_i + \frac{1}{3} \text{ Education}_i + \frac{1}{3} \text{ Standard of Living}_i,$$

$$\frac{1}{3} \text{ Health}_i = \frac{1}{6} \text{ Nutrition}_i + \frac{1}{6} \text{ Child - Adolescent Mortality}_i + \frac{1}{12} \text{ Maternal Health}_i$$

$$\frac{1}{3} \text{ Education}_i = \frac{1}{6} \text{ Years of schooling}_i + \frac{1}{6} \text{ School Attendance}_i$$

$$\begin{aligned} \frac{1}{3} \text{ Standard of Living}_i &= \frac{1}{21} \text{ Cooking Fuel}_i + \frac{1}{21} \text{ Sanitation}_i + \frac{1}{21} \\ &\text{Drinking Water}_i + \frac{1}{21} \text{ Electricity}_i + \frac{1}{21} \text{ Housing}_i + \frac{1}{21} \text{ Assets}_i + \frac{1}{21} \\ &\text{Bank Account}_i \end{aligned}$$
